AI Readiness Assessment

Know exactly where you stand on AI - and what to do first

Our comprehensive evaluation is a four-day assessment that turns AI uncertainty into a prioritised, sized plan - built for the public sector and governed from day one.

Your Four Days

Start with a focused, four-day sprint, working alongside your team - you leave with a prioritised, sized plan - not just a report.

DAY 1

Use cases + data deep dive

DAY 2

Integrations & platform review

DAY 3

Governance, security & operating model

DAY 4

Synthesis, scoring & the report

Built For Trust

✧ Designed to support to AI regulation - EU and UK

No "out of scope" - governance designed in, not bolted on: least-privilege access, audit logging, human-in-the-loop checkpoints and risk classification.

✧ Informed by ISO 42001

The international standard for AI management systems - assurance that your AI is governed and managed responsibly, end to end.

What You Get

Upon completion, you receive a clear, executive-ready picture of where you stand and what to do first - expanded in the three outputs below.

01: PICTURE

A readiness picture

A clear, scored view across six domains - what's ready, and what's blocking progress.

02: MAP

A data-to-use-case map

Under-used data surfaced and matched to ranked, feasible AI opportunities.

03: PLAN

A modernisation path

A prioritised modernisation path with indicative effort and timescales per step, delivered incrementally by Forward Deployed Engineers.

AI Readiness Assessment

Why do an AI Readiness Assessment?

Most staff are already using AI at work - often without approval. The moment staff use AI, accountability sits with the organisation - so doing nothing is no longer a choice.

We can help you move forward safely, starting small.

Implementing AI without a clear roadmap often leads to wasted resources, security vulnerabilities, and fragmented workflows. This assessment evaluates your current infrastructure, data maturity, and team capabilities to create a seamless, low-risk deployment strategy aligned with your broader commercial goals.

Clients trust this process because it removes the guesswork from technological adoption. By providing objective, data-backed insights, we help leadership teams make informed investment decisions, align stakeholder expectations, and avoid the costly mistakes typically associated with rushing into unguided digital transformations.

We look at your readiness through two lenses at once - your data and your application stack. And we score across six core areas:

-  **Data Foundations**
Is your core data complete, consistent and fit for AI?
-  **Integrations & Data Landscape**
Do data flows and dependencies support end-to-end AI?
-  **Architecture & Platform**
Can your platforms scale, perform and host AI safely?
-  **Security & Governance**
Is AI use secure, compliant and free of shadow AI?
-  **Target Operating Model**
Are roles, ownership and decisions set up to run AI?
-  **Organisational Readiness**
Do skills, awareness and adoption let you move at pace?

The Benefits

-  **Risk Mitigation:** Identify and resolve potential data security, compliance, and privacy issues before deployment.
-  **Cost Efficiency:** Spend with confidence - invest based on evidence, not guesswork.
-  **Strategic Alignment:** Ensure all AI initiatives directly support and accelerate your core business objectives.
-  **Operational Clarity:** Clear visibility into which departments and workflows are most primed for automation.
-  **Future-Proofing Infrastructure:** Build a scalable foundation ready to adapt to rapidly evolving technologies.
-  **Enhanced Performance:** Improve the odds of adoption by starting with the right, low-risk use cases.

How We Find Use Cases

We surface the under-used, 'dark' data hiding across your systems, map it, and match it to concrete AI opportunities.

Every candidate is scored against five questions, so you start with a safe, high-value win:

-  **REPEATABLE**
-  **CROSS-APP**
-  **DEFINABLE**
-  **REVERSIBLE**
-  **RISK-LEVEL**

Next Steps

Start with a free 1-hour discovery call. We'll pinpoint your top 5 AI opportunities. No obligation.
