

AI-driven invoice management that takes care of Peppol too

This is the public sector version of ADVT's inSTREAM Platform. Intelligent Document Processing for public sector finance teams that want to automate Accounts Payable, reduce processing costs and strengthen control.

Why Integra IDP

Invoice volumes, manual data entry, complex documents and staffing pressures can create significant operational challenges for Accounts Payable teams. Integra IDP uses AI and machine learning to understand invoices, extract and validate information, and route documents through the appropriate workflow.

Unlike traditional OCR, the platform is designed to handle complex, multi-page and unstructured documents while working with Integra master data and finance processes. Human-in-the-loop support is available where teaching or clarification is required.

What You Get

Automated invoice capture, intelligent extraction, validation, matching, workflow, secure document archiving, dashboards, notifications and integration with Integra ledgers and master data.

The Benefits

- A secure Peppol gateway for e-invoicing readiness
- Significantly less manual data entry and touch time
- Duplicate and fraud detection
- Faster invoice-to-pay processing
- Reduced errors and operational noise
- Improved prompt payment performance
- Complete visibility and auditability

Next Steps

Assess your current invoice-processing operation and identify where intelligent automation could release capacity, improve control and accelerate payment. Your account manager can organise a call for you on this whenever you are ready.
